

Sustainability Policy

Sustainable Model of VSPT

At VSPT Wine Group, we understand Sustainability as a corporate value and a fundamental pillar for achieving our strategic objectives.

This model strives for long term planning in alignment with the business, orientated towards the well-being of our people and communities. It aims to minimize negative impacts and risks, foresee potential threats, generate value for our clients and consumers, and to be sustainable over time. It has been organized into three major areas (Climate Change, Conscious Consumption and Sustainable Progress), with nine priority agendas.

Major Commitment: Carbon Neutrality by 2050

We are aware that climate change is a threat for future generations and we want to be part of the solution to tackle it and mitigate its consequences which, as an industry linked to agriculture and dependent on the climate, we are already feeling.

We have taken on the challenge of becoming Climate Positive by 2050, through collaborative work with the IWCA as Silver members.

Estrategy of Circular Economy

We understand the importance of incorporating a circular management model into our productive process – from the vineyard to our wines' arrival at destination – in order to achieve a far more efficient use of our natural resources and to contribute to waste reduction. Special focus is placed on our organic, industrial and household waste, the latter of which is addressed through incorporating ecodesign.

Logic of Transparency and Compliance

Our work on quality and sustainability is supported by international standards and regulations, as well as our own internal policies and statements. These are aligned to the Sustainable Development Goals proposed by the UN.

For this reason, we have established a sustainability management model, based upon our major commitment of Carbon Neutrality by 2050, aligned with a strategy of circular economy, and through a logic of transparency and compliance.

CLIMATE CHANGE

With an aim to mitigate profound changes in our climate, we have set ourselves the goal of becoming Climate Positive by 2050. At the same time, we have incorporated the use of Renewable Energy into our operations. We are also dedicated to protecting and promoting the endemic and native flora and fauna, characteristic of Chile's central zone, through a robust, long-term reforestation plan

CONSCIOUS CONSUMPTION

Throughout the production and commercialization of our products, we strive to ensure the well-being and development of our people: employees, producers and communities; and to protect the environment. We have now incorporated a commitment to education and recycling into our activities, including instructions for the final disposal of our bottles and packaging, incorporating eco-design into our entire portfolio, as well as 100% waste management across all of our production plants.

SUSTAINABLE PROGRESS

In line with our commitment to promoting community development, we carry out continuous work towards responsible supply for our wine production, through personalized consultancies on this subject. In parallel, we continue to strengthen our internal "Quality of Life" program, with an aim to promote a healthy balance of working and family life.
