

# Circular Economy and Ecodesign Policy

## Challenges 2050

At VSPT Wine Group, Sustainability and Innovation are part of our spirit and represent two of our five corporate values.

We currently manage our business under a Sustainability model, which focuses our work on the pursuit of Carbon Neutrality by 2050, through a Circular Economy, in which materials move in a closed loop ensuring that they are later reused, recycled and/or composted. As a result, we aim to decrease our greenhouse gas emissions, domestic waste and extraction of natural resources.

Ecodesign is therefore a key tool for reaching our objectives, allowing us to minimize the environmental impacts of our products throughout their life cycle.

## Circular Economy and Ecodesign Ambitions for 2030

The aim of this policy is to set out our ambitions in this area. These serve as guidelines for the design of both our current bottles and packaging, as well as for future projects.

	WHY?	HOW?	2030 Goals
<b>1. REDUCE</b> the weight of our packaging	Reduce waste generation and mitigate the emission of greenhouse gasses	Optimizing our packaging portfolio	<b>-10%</b> average bottle weight in all segments
<b>2. REDESIGN</b> for circularity	Achieve a portfolio of products created for proper post-consumption management	Choosing packaging conceived to be recycled and/or composted and with recycled material in its composition	<b>100%</b> recyclable and/or compostable materials <b>60%</b> recycled material in packaging composition
<b>3. RECYCLE</b> our products	Prevent that packaging materials end in landfill	Promoting conscious consumption	<b>100%</b> portfolio with recycling instructions
